

How to Clean your Demystifier Diffuser

Keeping your **Demystifier** essential oil diffuser clean is an important part of assuring the longevity and quality of your diffuser. It is recommended to thoroughly clean your diffuser at least monthly and after prolonged inactivity.

Cleaning Instructions:

1. Be sure the diffuser is completely powered off and unplugged. To do so, hold down the "ENTER" button for 3 seconds until the display turns off, then unplug the unit (*you will hear a beep noise and the display will turn off*).
2. Push the button on the side of the Diffuser to eject the head of the unit.
3. Detach the essential oil bottle containing the oil and pour the oil into a separate container to store while unit is being cleaned.
4. Twist off the nozzle on the top of the head.
5. Gently pull the clear plastic tube off from underneath the head of the unit (*do not pull off the black cap from the plastic tube, please keep intact.*)
6. Completely immerse the head, nozzle, plastic tube, and essential oil bottle container in a bowl of isopropyl alcohol and soak overnight (*at least 8 hours*).
7. After soaking, take a clean rag or paper towel and wipe off any oil residue that may be present.
8. Be sure there is no obstruction in the holes of the head, nozzle, plastic tube and in the tiny holes on the black cap of the plastic tube. You can blow air through these holes to make sure these passageways are clear.
9. Reconnect the clear hose to the bottom of the head and reconnect the nozzle to the top of the head (hand tighten only).
10. Pour essential oil back into plastic bottle and reconnect to the head.
11. Insert the head back into the diffuser and push down until you hear the head click into place.
12. Plug in the diffuser's power supply and hold down the "ENTER" button for 3 seconds until the unit turns on (*you will hear a beep noise and the display will turn on*). Once the diffuser turns on, your existing diffuser schedule will resume.
